

Computing Relay

A New Computer Short Block Class
Mrs. Estes' Rotation

Computing Relay is designed to provide students with a review of basic competencies in computer use and an opportunity to explore a range of applications with a focus on three areas of study:

- 1-Business Computer Applications with Microsoft Office—Mrs. Estes
- 2-Visual Communications with Adobe Photoshop—Mrs. Ackerman
- 3-Programming with Alice (a 3D intro to programming concepts)—Mr. Isselhardt.

Students will rotate among three teachers with different areas of expertise and learn specific software applications. The class will provide an overview of basic operations, strengthen skills in research, communication, and problem solving. Social and ethical implications will also be addressed. Opportunities for further studies in specialized interests will be explored.

Business Computer Applications:
